

XM RADIO provides some very helpful and useful information for us truckers. Truckers need the Traffic and Weather service so we can know what we well be running into ahead of time. If we know far enough ahead of time of traffic problems we can easily find another way around it so that we are not delayed in getting our loads to their destination on time. Also the weather plays a factor in knowing if there is incliment weather ahead so we can plan accordingly. I think the Government and the house and senate and the people who make up the laws that have to do with truckers and the public need to stay out of our business because they are not out here like we are and don't drive the long miles we do.

I would love to take a member of congress or even a policeman on the road for a week so they can see for themselves what a difficult job we have and some of the careless, and stupid drivers we have out there.

I could go on and on but I won't at this time.

Thank You for your time.

Sincerely,

Charles Reinhardt
